

Hydromat Forms Advanced Product Group

Hydromat Inc., manufacturer of rotary transfer machines, has formed a service-oriented division it calls the Advanced

Product Group. This division will support customers in designing, engineering and building turnkey automated systems. These

services complement the machining, fabrication, finishing and assembly capabilities available at the company's facility in St. Louis, Missouri.

Hydromat says customers will benefit by receiving manufacturing process solutions from a single source. "By keeping the project within our organization, we can develop a number of elements of the final product at

the same time, speeding the overall process," notes Martin Weber, Hydromat's vice president of manufacturing and engineering. Mr. Weber has been with Hydromat for 28 years and will lead the Advanced Products Group.
