COMPANY DESCRIPTION

Hydromat Inc. is the industry leader in the manufacture and assembly of precision transfer machines: Rotary, Inline, Trunnion, the HydroTurn, Advanced Technology (AT) Machines and EPIC R/T Technology. Founded

in 1979 and based in St. Louis on a 200,000-square-foot campus, Hydromat has a reputation built on a commitment to product quality, customer service and technological innovation.

Hydromat has been supplying the North American market with metalcutting solutions for more than 30 years through its expertise and industry leadership in rotary transfer machine technology. The slogan "Committed to Excellence" is the foundation of the Hydromat tradition.

PRODUCTS/SERVICES

The Hydromat rotary transfer machine is a modular system consisting of ten to 16 horizontal and five to eight vertical tool spindle units rigidly mounted around a precision cast iron ring. Barstock, coils or blanks can be fed into the machine.

The newest Hydromat, the EPIC R/T, possesses all of the reliability and flexibility of its predecessors. What sets this product line apart is EMC Technology (Embedded Motion Control). This features special plug-and-play programmable valves integrated or embedded into each tool spindle unit, virtually eliminating the use of more complex CNC control components, yielding the ultimate in rotary transfer flexibility.
