Multispindle delivers for ever-increasing complex production

Tornos Multispindle next generation Tornos CNC multi is the MultiAlpha 6x32 that meets the need for every-increasing production of complex components without secondary operations with the addition of the three axis independent counter-spindle with five backworking tool positions and the latest advancement – integrated independent motorspindles.

MultiAlpha 6x32 unit is a 'ground-up' redesign featuring a 1.26"-dia bar capacity with the work spread over six spindles. The MultiAlpha 6x32 is equipped with this latest generation of spindles featuring synchronous motors. Each spindle functions independently of the others for cutting rpm, spindle stops, and indexing. The spindles with independent speed settings enable the full range of cutting tools to be employed. **Hydromat, Inc., www.rsleads.com/702tp-176**
